

Colour coding

A standardised colour coding indicating different kinds of actor groups was considered by the team in Vienna to be helpful to make the graphs comparable.

We suggest the following colour code:

Please use purple lines for any other actors that you feel do not fit into this classification.

Forms and administrative/political levels

Please use **boxes** for indicating state-actors from all levels (national, regional/provincial/federal state, and municipal/local) and **ellipses for indicating non-state-actors**.

Please structure the graph according to **administrative/political levels** starting with the national level at the top, followed by the regional/provincial/federal state in the middle and the municipal/local level at the bottom. If space allows for leaving a space between those levels, please do so.
